

MOVEit™ Central

Easy and Reliable File-Based Automation

File-based tasks are the lifeblood of any organization, but often the applications and processes that support them are less than ideal. In many organizations some recurring tasks are still performed manually, and those that are automated depend on unreliable custom scripts that can fail at any time and are often costly to maintain. The result is an unpredictable and insecure set of business processes.

Easily Automate Your File-Based Tasks

MOVEit Central provides a simple but powerful user interface for defining business workflows that's easy enough for anyone on your IT team to use because no scripting is required. The heart of MOVEit Central is a reliable engine that ensures the predictable, secure delivery of your business files. Plus, a powerful centralized console ensures you have visibility and control over all file movement. That is why hundreds of companies, including many in healthcare and finance, have turned to MOVEit Central to automate their file-based tasks and confidently meet their SLAs and compliance requirements. And with true “anywhere-to-anywhere” transfer capability, MOVEit Central successfully automates millions of mission-critical data transfers – with minimal operational or system resources.

The Industry's Most Secure File Transfer Automation

Now you can rest assured that your organization's most critical and sensitive data is completely secure. With powerful enterprise-class security features – end-to-end encryption, non-repudiation, guaranteed delivery, FIPS 140-2 validated cryptography, OpenPGP, and tamper-evident cryptographic logging – MOVEit Central delivers the security enterprise organizations need for secure data transfers. These best-in-class security capabilities help your organization comply with corporate, industry, and government regulations such as Basel II, FIPS, FISMA, GLBA, HIPPA, PCI DSS, and Sarbanes-Oxley.

MOVEit Central Architecture

Automate Your Most Complex File Transfer Processes

One way to improve productivity is to reduce the extensive effort related to managing your organization's file transfer processes. MOVEit Central integrates directly into your existing file transfer workflows, essentially becoming the central hub for all file transfer processes. It automatically "pulls, processes, and pushes" all files to any platform, including network architectures, operating systems, and protocols.

With MOVEit Central, administrators can automate, simplify, and monitor file transfer processes without any manual effort – critical steps in improving governance processes. For example, IT administrators can simply "click together" hundreds or thousands of simultaneous, event-driven, scheduled, and on-demand tasks. They can automate business processes, rules, and logic, or choose to remotely configure, monitor, and control tasks.

Advanced Tasks With Conditional Logic

Administrators can also easily manage complex, multi-step logic-based workflows and implement elaborate, logical, and detailed rules – all with no scripting or programming required.

For example, administrators can efficiently define what files to move, where to find them, security measures, and when to send them, or they can add customized logical "If, Then, Else, And, Or" conditions into existing file transfer task execution.

MOVEit Central is the industry's most flexible file transfer workflow solution. It is quick and easy to deploy with typical deployments measured in days – not months – and without the need for costly professional services. MOVEit Central is standards-based, completely scalable, and integrates easily with your existing infrastructure.

Enterprise organizations can also deploy MOVEit Central across segmented networks and distributed architectures. It even offers high availability with built-in failover, full integration with SQL Server and supports virtualization servers running on VMWare ESX and Microsoft Hyper-V.

COMPONENTS DEPLOYED ON-PREMISES INCLUDE:

MOVEit File Transfer (DMZ), MOVEit Central, MOVEit Ad Hoc, and MOVEit Mobile. And MOVEit Cloud delivers same functionality as a Cloud service.

PURCHASE OPTIONS

MOVEit Central Enterprise

Delivers the full unlimited value of MOVEit Central. It supports up to 5000 tasks and up to 100 simultaneously run tasks, including customer scripting and advanced tasks with conditional logic.

MOVEit Central Enterprise ASx Module

Ability for secure EDI and supply chain transfer over EDIINT AS1, AS2 and AS3 encrypted protocols to exchange structured data electronically.

MOVEit Central Enterprise Failover Module

In case of server failure or abnormal termination, this provides automatic failover to a secondary, redundant server to ensure maximum uptime and prevent data loss.

MOVEit Central Enterprise API Module

Third-party programs, scripts, workflows, document management, and other processing powers can be programmed to control file transfers and data processes. API available on COM and Java.

MOVEit Central Enterprise PGP Module

An optional purchase module that enables PGP encryption and key management functions within MOVEit Central Enterprise with no restriction on number of keys that can be used.

MOVEit Central Corporate

A proven enterprise-class automation engine running on a smaller budget. It enables all types of businesses to easily automate and secure up to 50 complex data transfer processes and workflows. Upgrade from MOVEit Central Corporate to MOVEit Central Enterprise is available.

MOVEit Central Corporate PGP Module

An optional purchase module that enables PGP encryption and key management functions within MOVEit Central Corporate and is limited to 10 keys. Upgrade to MOVEit Central Enterprise PGP Module is available.

Features and Capabilities Included in MOVEit Central

File Transfer Protocol

- FTP
- SSL / FTPS
- SSH / SFTP
- HTTP/S
- SMTP / POP
- CIFS / SMB (Accessing Network Storage)
- EDIINT AS1, AS2 & A S3 (Optional Module)

Administration

- Integration with Microsoft SQL Server
- Unlimited Simultaneous Local/Remote Users
- Number of Hosts (Optional Module)
- Remote Account Creation (Unlimited)
- Delegation of Permissions (Host/Tasks, Groups/Users)

Security

- Built-in End-to-End Encryption
- Transport Encryption ("Data-in-Transit")
- FIPS 140-2 Validated Cryptography
- Encrypted Administrative Access
- File Integrity Checking
- Non-Repudiation / Guaranteed Delivery
- Anti-Virus Solution Integration (McAfee, Symantec & Trend Micro)
- Cryptographic Tamper-Evident Logging
- OpenPGP File Encryption (Optional Module Unlimited Number of Keys)

High Availability

- Automatic Checkpoint Restart
- Alternate Host with Automatic Rollover
- Automatic Failover Node License (Optional Module)

Automation & Productivity

- Up to 5,000 pre-configured tasks
- Up to 100 simultaneously run tasks
- Easily Manage Complex Workflows and Implement Granular Rules
- Task Builder – "Click Together" up to Thousands of Tasks
- Run Processes on a Scheduled, Event-Driven & On-Demand Basis
- Multiple Tasks Can Be Run Together Simultaneously
- "Pull, Process & Push" Files Among all Platforms/Architectures/OS's
- Synchronization of Files and Folders on Different Systems
- Advanced Tasks with Conditional Logic
- Custom Scripting
- API for Custom Programming
